Summary

For over a decade, I've partnered with organisations across the public and private sectors to build, launch, and scale impactful products while transforming how they work. My passion lies in driving digital transformation, uncovering innovative ways to harness technology for better outcomes, and assembling high-performing teams that thrive on modern practices—empowered product management, user-centric design, and agile development.

Experience

Freelance consultant

FEB 2023 - Present

As a freelance consultant, I contributed to the following projects:

- **Orilat (<https://www.orilat.com/>) - 2023**
Collaborated with Orilat, a leading toy retailer in Latin America, to map all business processes in preparation for ERP and CRM implementation. Key responsibilities included stakeholder interviews, an evaluation of existing digital processes, and the facilitation of a change management prioritisation workshop. I mapped critical processes such as sales, procurement, quotations, shipping, and payments, producing deliverables that included a comprehensive user story map and validated mock-ups for core solution components. I proposed streamlined processes and compiled a wishlist of future features. These outputs enabled Orilat to approach ERP vendors with a clear understanding of their requirements, significantly simplifying the procurement process.
- **EU Sparks for Climate Hackathon (<https://eusparks.eu/winning-teams/>) - 2023**
Remotely facilitated one of the winning teams during the 3-day EU Sparks for Climate Hackathon. My role involved onboarding and guiding seven team members, fostering collaboration, and helping them generate and develop innovative ideas in alignment with the hackathon's requirements. I ensured smooth teamwork and clear communication throughout the event.

- **CIPPEC (<https://www.cippec.org/>) - 2023**

Authored a comprehensive report for the Argentinian NGO CIPPEC, focussed on data aggregation and visualisation for digital skills and employability policy. This involved analysing a specific policy document and defining an implementation framework. Key deliverables included detailed technical specifications, required team members' roles, resource allocation plans, time and cost estimates, platform architecture proposals, governance structures, and maintenance methodologies.

- **Open Government Partnership (<https://www.opengovpartnership.org/>) - 2024-2025**

Produced an in-depth evaluation of the Open Government Partnership's website and a strategic report with recommendations for improvement. My work included stakeholder interviews with content-producing teams, a CMS analysis, SEO performance evaluation, content inventory, and a review of publishing processes. Deliverables included a list of usability-driven recommendations, low-fidelity mock-ups, project sizing, a Gantt chart for the first year of implementation, strategic proposals for enhancing website impact and recommended changes of their ways of working, including a redefinition of responsibilities and tasks for the Web Manager role. The report served as the foundation for the organisation's web development roadmap for the year. Additionally, I advised on the evaluation and prioritisation of immediate website changes during my consultancy period.

EVM / Digital Transformation and Innovation Consultant

FEB 2022 - DEC 2024

I initially worked on the development of a comprehensive report for the Government of the Canary Islands, drawing on my expertise in digital government services to design a strategic roadmap for digital transformation. The report encompassed:

- Best practices for digital government operations, including technical and user experience guidelines, agile methodologies, procurement strategies, ways of working, communication protocols, and service development standards.
- Low-fidelity mock-ups proposing key improvements to the existing website, with a strong focus on content design.
- An implementation plan addressing transitional stages (MVP, alpha, and beta versions), resource requirements, political approvals, and risk assessment.

This report played a crucial role in the drafting of the terms of reference for a public tender, enabling the administration to modernise its outdated website and digital practices effectively.

From 2023 to 2024 I was focussed on the formation of a business unit dedicated to digital products. I was responsible for:

- Conducting recruiting and coaching for the formation of the product team, including the selection of service suppliers.
- Developing the product strategy, work methodologies, and processes for evaluating product ideas within the company.

- Leading the product team, driving the implementation and launch (0-1) of Tamiz (www.tamiz.es) as the company's first digital SaaS product.
- Developing the initial strategy and roadmap for Tamiz, alongside its stakeholders, setting a budget, outlining objectives, coordinating the work of providers related to security, marketing, growth, and UX, and overseeing subsequent stages developed by the product PM.

[Kin and Carta](#) / Principal Product Manager

OCT 2020 - AUG 2021, BUENOS AIRES

I had the dedicated role of product manager of Shell Energy's mobile app in the UK, an app with more than 130,000 monthly active users for one of the top 10 energy suppliers in the UK. In this role, I led the roadmap definition, priorities, alignment, and new features based on stakeholder management and continuous user research, in a 100% distributed team of 10 people.

Also in this role, I helped kick-start the product capability in Kin and Carta's Buenos Aires office, by leading the hiring of new PMs and improving the practice, going from 0 to 7 PMs in the span of a year.

[Buenos Aires City Government](#) / Digital Experience Director

DEC 2019 - OCT 2020, BUENOS AIRES

I was in charge of conducting a team of 30 people, including UX practitioners, content designers, and developers, working on improving the official city government website *buenosaires.gob.ar*, used by more than 200,000 people each month, setting the standards for digital products and reviewing user experience for all digital products created by the government.

In this period we went from a fully co-located team to a fully distributed team since the start of the COVID pandemic, implementing new ways of working for the team and dedicating most of our work to the communication of government measures and information about the pandemic, for which the website was the official communication channel, whilst working on a new website version and design system.

[BICE / Investment and Foreign Trade Bank of Argentina](#) / Digital Strategy Consultant

JAN 2019 - DEC 2019, BUENOS AIRES

Consulted on the onboarding experience of new customers.

Ministry of Modernization of Argentina / National Director of Digital Services

JAN 2016 - OCT 2018, BUENOS AIRES

In charge of leading a team of over 50 people that worked on implementing the single-domain strategy for the country's government *argentina.gob.ar*, the single-window strategy for transactions *Mi Argentina* and the single platform for government office appointments *argentina.gob.ar/turnos*. Responsible for:

- Unifying more than 1000 websites under one platform with one voice, that went from 0 to 10,000,000 monthly active users in the span of one year and is to this day the single official channel of communication for government services.
- Leading the creation, launch, and management of the official G20 website for 2018.
- Implementing digital standards throughout government platforms and mobile applications.
- Defining a citizen satisfaction strategy and implementing it through manuals, training of front-desk public officials, and satisfaction platforms (surveys and complaints).
- Producing a complete list of government services with their corresponding guides and digitization levels.

eGov office of the Buenos Aires City Government / Creativity and Usability Manager

MAR 2012 - DEC 2015, BUENOS AIRES

In charge of a team of 6 people that worked on implementing a single-domain strategy and the user experience design of mobile applications.

In this role, I worked on the implementation of the new *buenosaires.gob.ar* single domain strategy and website, in charge of the content strategy, information architecture, stakeholder management, and UX design.

New Media office of the Buenos Aires City Government / Multimedia designer

JAN 2010 - MAR 2012, BUENOS AIRES

One of the 4 co-founders of the first government office dedicated to social media in Latin America, in charge of producing content (research, videos, posts), coordinating social media channels for the main government accounts, and the social media strategy and training for ministerial government teams.

Informal blog of the Buenos Aires City Government / Blogger

JUN 2008 - JAN 2010, BUENOS AIRES

Responsible for the city government's first informal blog, in charge of researching, producing interviews with citizens and public officials, and managing the blog and social media accounts.

Skills

- **Change Management** (Developing and executing change initiatives, supporting teams through transitions to new digital ways of working, agile methodologies for iterative design and delivery)
- **Roadmap Development** (Planning and prioritising features for product and service launches, defining milestones and timelines)
- **Technical Documentation** (Writing technical reports, RFPs, and strategic roadmaps, creating documentation for government and international projects)
- **Stakeholder Engagement** (Reporting to senior officials, ensuring alignment with org strategic priorities, conducting in-depth stakeholder interviews)
- **People Management** (Coaching and mentoring teams, recruiting talent, managing conflict, ensuring team growth and performance)
- **Cross-Functional Collaboration** (Aligning goals across teams, facilitating interdepartmental communication, coordinating project timelines and deliverables)
- **User-Centred Design** (Conducting UX research, developing user personas, applying design principles to create intuitive interfaces, iterative content design)
- **Process Mapping & Optimisation** (Identifying inefficiencies, mapping workflows, suggesting and implementing improvements to streamline operations)
